

Support seamless clinical workflows with proven Epic® integration.

SafeTrace Tx® Comprehensive Transfusion Management Software

Rapidly evolving digital health standards are placing even greater importance on interoperability. Our global agreement with Epic means hospital networks have access to purpose-built solutions for their clinical needs as well as support for their IT digital health transformation goals. The SafeTrace Tx® 510(k) cleared transfusion management software was designed as a fully integrated solution because we know it is paramount for your blood bank to send and receive patient and product information in real-time. From the blood bank to the bedside, this continuous communication enables your blood bank to:

- Provide traceability and compliance
- Use patient / product compatibility testing methodologies
- Leverage multi-hospital, multi-site capabilities
- Help extend patient transfusion safety to the bedside

HAEMONETICS®

SafeTrace Tx® – Built by Blood Bankers to provide you the features you need and the integration you expect.

SafeTrace Tx integrates with Epic® and other hospital information systems to ensure your data is shared efficiently, saving you time and resources by avoiding manual workarounds. This data exchange is vital as blood banks continue to face staffing and resource shortages. SafeTrace Tx can help support your blood bank during all times of need by providing access to comprehensive patient information, and promoting workflow efficiency and transfusion safety.

Complement your Epic systems with a transfusion management solution infused with knowledge and experience from blood banking specialists.

Learn why SafeTrace Tx is the system of choice at hundreds of institutions, including 5 of the top 10 hospitals in the US.¹

Connect SafeTrace Tx to BloodTrack® software solutions for safe, reliable and fully compliant point-of-care blood management.

This powerful combination can help your hospital:

- Enhance patient safety; electronically verify *right* blood product, *right* patient
- Improve C/T ratio
- Reduce turnaround time
- Reduce workload and free staff to focus on patient care
- Decrease blood waste
- Eliminate use of coolers and unsecured refrigerators
