

CLOSE CONFIDENTLY

REDUCE COMPLICATIONS¹

VASCADE[®]

Arterial & Venous Closure System

VASCADE[®] is the next-generation femoral arterial and venous closure system from Haemonetics. The system combines Haemonetics' proprietary collapsible disc technology and a thrombogenic resorbable extravascular collagen patch to enable rapid hemostasis while minimizing complications.

Safe

The ONLY marketed closure device proven safer than manual compression in a randomized clinical trial²

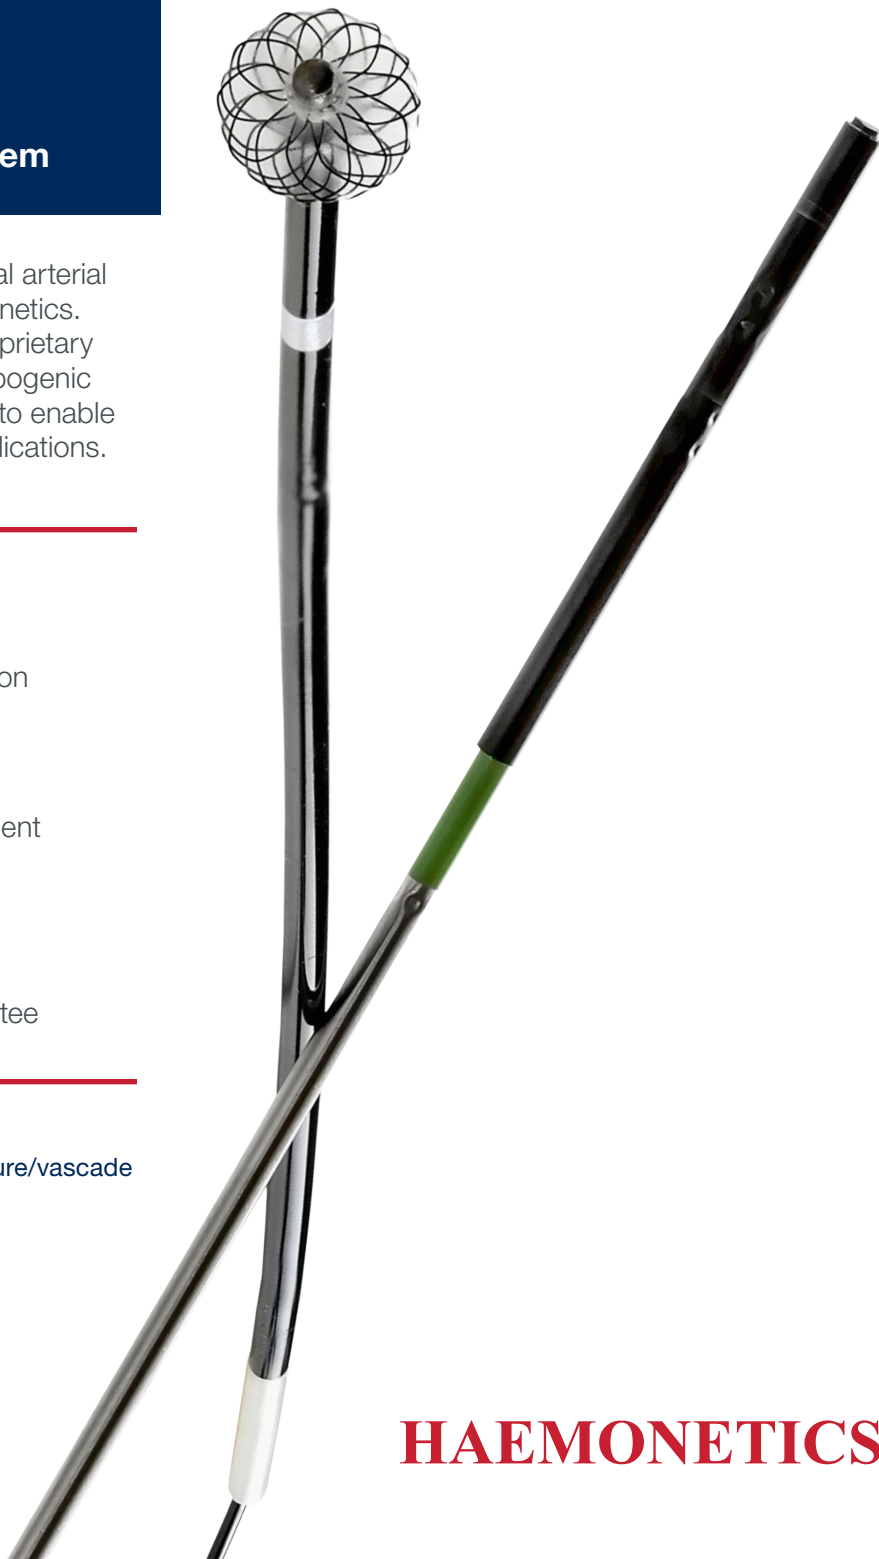

Simple

Elegantly simple, three-step deployment of extravascular collagen

Guaranteed

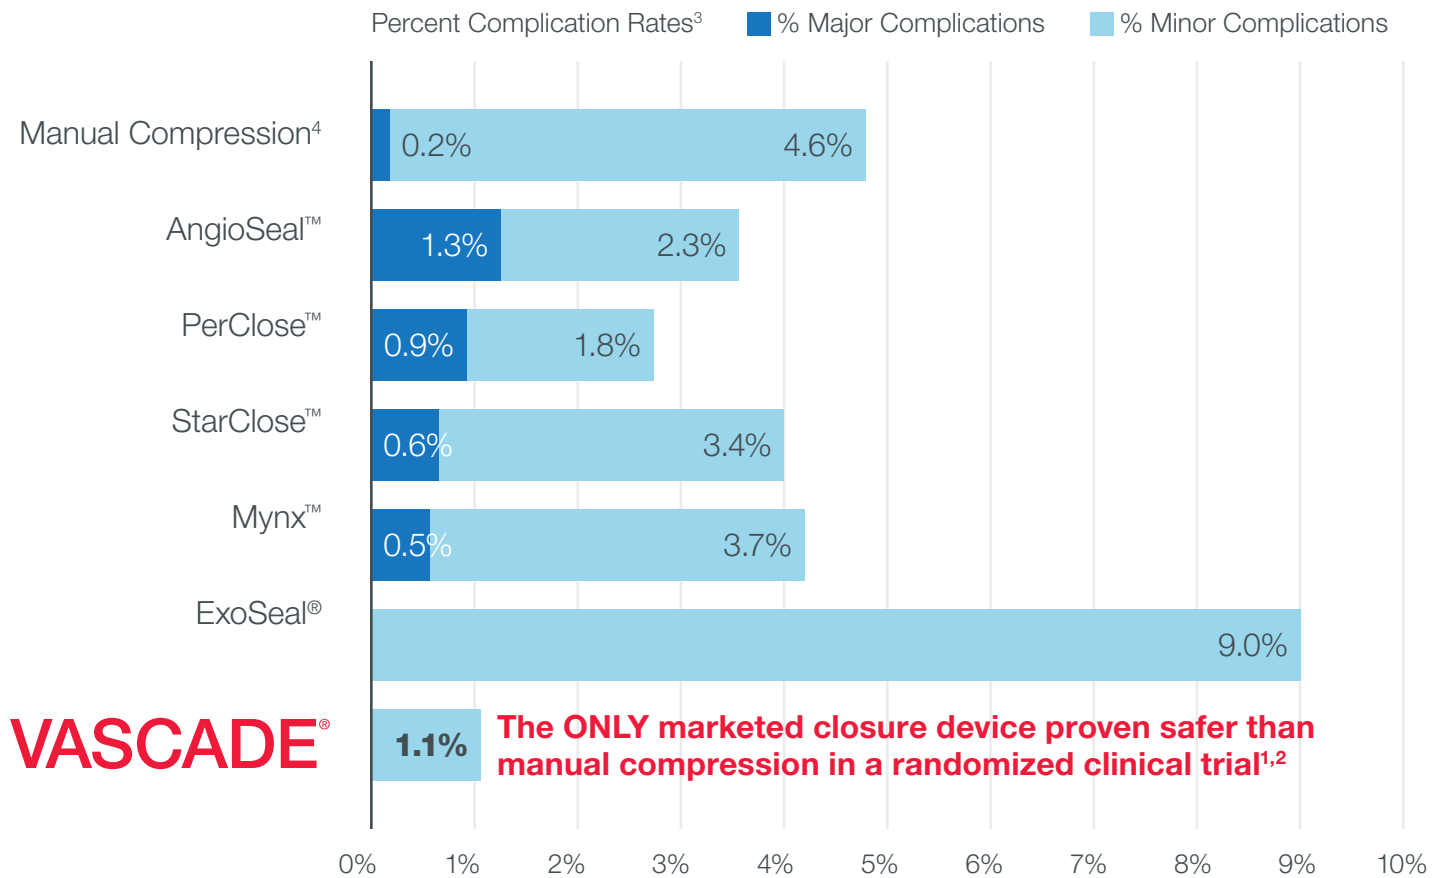

Sharing Risk by Sharing Costs[™] with the VASCADE[®] Performance Guarantee

¹ RESPECT Clinical Trial demonstrated VASCADE has significantly fewer minor complications compared to manual compression (p=0.002).

² IFUs of commercially available leading brands (VASCADE, AngioSeal, Mynx, Perclose, Starclose, Exoseal).

³ Data for the chart is from U.S. FDA IFUs and includes both Interventional and Diagnostic treatment arms. All Intention To Treat patients and events are included in the chart. As complication rate data are based on a cross-trial comparison and not head-to-head clinical trials, the data may not be directly comparable due to differences in study protocols, conditions and patient populations.

⁴ Complication rates for manual compression presented are based on the composite of manual compression complication rates included in the IFUs of the devices presented.

Please consult product labels and instructions for use for indications, contraindications, warnings, precautions, and adverse events. See VASCADE® IFU 2611 Instructions for Use.
